Fact Sheet

Technical Approach - 5 Tools
Django - Backend Framework
Cloud9.IO - Backend Server
Git/GitHub - Repository & Version Control
Bootstrap - Frontend design - look & feel
JQuery - Frontend scripting and animation

The Problem:
Since the dawn of time, humanity has always sought out entertainment through competition. Be it sporting, intellectual, or gaming, competition has been part of our daily life. Nevertheless, one key problem that persists is the difficulty for people to connect and find people of similar interests in competition. Our application aims to resolve this problem for good.

Features & Use Scenarios
- *As a 1v1 Competitive User:*
  - Find others who can and are willing to compete with you.
  - Make agreeable arrangements (date, time, location, etc.) based on information we compile that you know of each other.
  - Discuss with others on strategies online.
  - Know where you stand in comparison to other people.
- *As a group competitive user:*
  - Find out more and register for tournaments that suit you
  - Discuss with others on strategies online.
  - Know where you stand in comparison to other people.
- *As a tournament organizer:*
  - Facilitate the event management and event advertising (awareness) part of the tournament.
  - Showcase and broadcast the tournament for all to see.
  - Help disseminate administrative information.

Objectives
- Social networking for people of similar interests.
- Find like-minded individuals as opponents and teammates.
- Provide support for individuals in a particular area
- Facilitate the management and setup of tournaments and events.

Why us?
Current solutions are short-term and occasionally single-use only.

Our solution is an entire social platform for you to discuss with people of similar interests so that you can keep coming back to fight against these people.
